TECHNICAL LECTERN 1 - MOTORIZED HEIGHT ADJUSTMENT

ROBUST LECTERN WITH MOTORIZED HEIGHT ADJUSTMENT, 8U FOR 19" TECHNOLOGY

PRODUCT

The elegant and electrically height-adjustable lectern is the ideal solution for equipping technical colleges, universities and wherever lectures and presentations are important.

In order to adapt the Technik lectern 1 ergonomically to the height of each speaker, a stepless, electric height adjustment of 30 cm is integrated. This provides the speaker with as much comfort as possible.

In addition to mobility, the electrically height-adjustable lectern also offers many additional options and optional cut-outs for integrating multimedia technology.

The technical lectern 1 is equipped with 4 smooth-running castors, 2 of which are lockable, so that it can be used on the move at any time.

To accommodate 19" technology (max. 8U), the lectern has a lockable base cabinet in which various technical devices can be accommodated and stored. The basic equipment includes a shelf for a glass of water and a connection panel (HDMI, USB/LAN, 3.5 jack stereo and 230V socket) in the middle under the lectern top, which is inclined approx. 8° towards the speaker.
