DISPLAY STANDS WITH CASTORS - "VST-D" SERIES

AVAILABLE IN DIFFERENT VERSIONS AND FOR DIFFERENT LOAD CAPACITIES

PRODUCT

The VST-D series can be placed in the corners of rooms or in the middle of open spaces. The display holders can be integrated into any room concept thanks to the color design options for the column and base plate/base.

The VST-D is ideal for motorized height adjustment of 50 cm for almost all display sizes. Whether for one display up to 98" or for two displays with max. 55"/65".

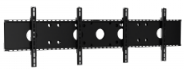

It is up to you to decide whether the display should be height-adjustable by raster, manually or motorized 50 cm. We will be happy to help you make the right choice.

The motorized version guarantees infinitely variable adjustment of your display up to a maximum load of 120 kg. The ball-bearing mounted carriage ensures very smooth running as it is guided between two aluminum profiles.

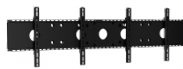

All of our motorized display stands are equipped with an on/off switch. This is attached to the LCD holder and is discreetly located directly below your display. This makes handling as easy as possible for you.

To guarantee a flawless appearance, the system's own cable management takes place within the column. The cable outlets are located in the base plate and in the lower section of the removable rear panel. There is also an integrated holder for a mini PC (additional device). Ventilation slots are located both at the top and bottom of the column.
